

KALEEM ULLAH

WEB DEVELOPER

Gulberg, Lahore, Pakistan | 0329-7833182 | kaleemullah2776006@gmail.com | github.com/kaleem-webdev

PROFESSIONAL SUMMARY

Web developer with just over a year of hands-on experience across three roles, working on both the frontend and Laravel-based backend of real client and internal projects, from first build to live deployment. Comfortable with HTML5, CSS3, and JavaScript (ES6+) on the frontend and PHP, MySQL, Laravel, and Livewire on the backend, and used to working within MVC architecture day to day. I like turning a design into an interface that actually holds up across browsers and screen sizes, and I've gotten fairly good at shipping features when a deadline is close. Still finishing my BS in Computer Science at Virtual University of Pakistan, and I keep building and pushing projects to GitHub outside of work.

CORE COMPETENCIES

HTML5 & Semantic Markup • CSS3 (Flexbox/Grid) • JavaScript (ES6+) • Bootstrap 4/5 • PHP & Core PHP • Laravel & Livewire • MVC Architecture • MySQL & CRUD Operations • Responsive & Mobile-First Design • Cross-Browser Compatibility • REST Concepts • Git • UI/UX Fundamentals • SEO (Sitemap & Search Console)

PROFESSIONAL EXPERIENCE

Web Developer — *BM Global*

Dec 2025 – Aug 2026

- Took ownership of Laravel MVC modules from the initial requirements all the way through to deployment, building out Blade-templated interfaces with HTML, CSS, Bootstrap, and JavaScript.
- Built a complete contact-form submission flow, including the backend validation and processing behind it.
- Brought Livewire into a few static pages to make them dynamic and interactive, so users weren't stuck waiting on full page reloads.
- Got into the database layer directly more than once to track down and fix data and functionality issues on live client projects.
- Moved from mostly frontend work into full Laravel development over the course of the role, picking up more backend responsibility as I went.

Web Developer — *IT Genesis*

May 2025 – Dec 2025

- Worked both sides of the stack on active projects — building frontend features in HTML, CSS, JavaScript, and Bootstrap, then wiring up the form handling and database operations behind them.
- Kept existing production applications running and improving without breaking what was already working.
- Worked as part of a cross-functional team to get scalable features shipped on deadline.
- This was the first role where I combined frontend delivery with real backend ownership, and it's really where the full-stack side of my work started.

Web Developer — *Executive Internship — Murick Technologies*

Jan 2025 – May 2025

- My first professional web development role — built and maintained frontend interfaces using HTML, CSS, JavaScript, and Bootstrap.
- Put together a small library of reusable UI components that the team kept reusing on other pages, which cut down rebuild time.
- Worked closely with designers and backend developers to make sure frontend work fit cleanly into the bigger application.
- Was responsible for catching bugs and styling inconsistencies before anything went out the door.

TECHNICAL SKILLS

Frontend Development: HTML5 (Semantic Markup), CSS3 (Flexbox, Grid, Responsive Design), JavaScript (ES6+, DOM Manipulation), Bootstrap 4/5, Cross-Browser Compatibility, Mobile-First Design, UI/UX Basics

Backend Development: PHP (Core PHP), Laravel, Livewire, MVC Architecture, MySQL (Database Design, CRUD Operations), User Authentication (Basic), PHP & MySQL Integration

Search Engine Optimisation (SEO): XML Sitemap, robots.txt, Google Search Console, Page Indexing, Backlink Building

Tools & Practices: Git version control, RESTful concepts, Debugging & Cross-Functional Collaboration, Agile teamwork

EDUCATION

BS in Computer Science (In Progress)
Virtual University of Pakistan
